

VOX URANIAE:

O R,

An { ASTROLOGICAL,
ASTRONOMICAL,
METEOROLOGICAL, }

For the Year of our Lord God, 1682

And from the World's Creation according to
the best of Histories 5631.

Being the second after *Bissextile*, or *Leap Year*.
Wherein is contained.

The Scheme of the World's Revolution with an Astrological Conjecture thereon; Eclipses, Lunations, a Table of the Tides, Terms, and their Returns; the rising and setting of the Sun and Moon; likewise her southing together with her Aspects, as also the Configurations of the other Cœlestial Bodies, with useful Tables and other things fitting such a Subject, accommodated and referred properly to the Meridian of the August and Famous City of *London*, whose Zenith or Vertical Point is distant from the *Æquator* North ward 51 deg. 32 min. yet it may indifferently serve any part of great *Brittain*.

By DANIEL WOODWARD,
Practitioner in Astrology and Physick.

si scire vis veram splendidissimam & gloriosissimam Solis excellentiam, palidam Lunam & Stellarum influentiam, ceterorumq; Cœlestium Dei Omnipotentis operum Scientiam, imo aditum ad ipsum Deum studens Astrologia

LONDON, Printed by J. D. for the Company
of STATIONERS, 1682.

T O
His Truly Loving
A N D
Most Honourable Friend
JOHN WINTER,
Of *Durham* in the County of *Glocester*
(Esquire;)

DANIEL WOODWARD

In Testimony of the Honour he
bears Him and his worthy Family,
(for the many Favours received) most
humbly dedicates this his Astrological,
Astronomical and Meteorological Re-
creations for the Year 1682, wishing
Him not only External and Internal,
but Eternal Health and Happiness.

Ad Lectorem.

Courteous Reader.

AS I find this Years Endeavours received, I shall be the more encourag'd to present to publick View, some things of greater worth, with an expectation to become as serviceable to my Country, as some of our Annual Writers: Yet for all my pains and care in the composing, I may perhaps be carped at by some, especially by such that are any ways inemical to the Principles of Astrology. How ever the Blemishers of that noble Science, are those that never sought or understood her extrinsick Form and value, much less her innate Beauty; but do as others, as ignorant as themselves have done before them (i. e.) asperse her Fame, and so extirpate her worth by slandering; and those are such that seek her with repurachful Terms, which verifies the old Adage, *Ars nullum alium habet Inimicum præter Ignorantem*. But as to my self, what can I expect? I that am the meanest of Uranias's Favorites, alas! had I but Rhetorick to perswade, or Logick to prevail; yea, or any interest in the World to be minded, something might be done. However, it's still *Natura nil subito*, none on a sudden can arrive at Perfection, it rather requires the product of Eternity; for the Profundity of this Science is not like others, that may be fathom'd in a shorter space of time, this being allow'd by all to be scarce ever comprehended without some heavenly Inspiration or supernatural Wisdom.

May 11th,
1681.

D. WOODWARD.
A Lover of the Mathematicks.

*A Brief Chronological Account of some things worthy of
Note, since the Birth of Christ to this present Year, 1682.*

Since the Birth of Christ	1682	The Bp of <i>Cant.</i> beheaded--	37
Christ died on the Cross	1649	K. <i>Charls</i> the I. martyr'd ----	34
Rome burnt by the command of <i>Nero</i> -----	1620	Duke <i>Hamilton</i> , L. <i>Capel</i> and E. of <i>Holl.</i> were beheaded	34
England first received the Christian Faith -----	1505	<i>Worcester</i> Fight September 3 -	31
Scotland first received the Christian Faith -----	1479	<i>Cromwell</i> died September 3 -	24
The Tower of <i>Lon.</i> built	1113	Gen. <i>Monk</i> marched to <i>Lon</i>	23
Cambridge was made an Uni- versity -----	1047	King <i>Charles</i> II, arrived in <i>London</i> , May 29th -----	22
The <i>Deans</i> first came into <i>Englnd</i> -----	664	<i>Harrison</i> and the rest of the Regicides were executed at <i>Charing-Cross</i> -----	22
<i>Westminster-Hall</i> built	582	K. <i>Charles</i> II. crown'd 23 <i>Ap.</i>	22
The Conquest of England by <i>D. William</i> the Conqueror	614	King <i>Charles</i> II. married	20
<i>Paul's Church</i> in <i>Lon.</i> built	596	The first great Sea-Fight with the <i>Dutch</i> -----	17
<i>Lon.</i> Bridg built with Stone	493	The great Plague in <i>London</i> , whereof died 68586 in that Year, in all 97351 -----	17
The first Mayor of <i>London</i>	492	The great Fire in <i>London</i> on <i>Sep.</i> 2, 3, and 4, which con- sumed 13200 Houses -----	16
The Order of the Garter insti- tuted -----	338	The D. of <i>Albemarle</i> died --	12
Guns were invented	242	<i>London</i> rebuilt -----	11
Coaches first invented in <i>Eng- land</i> -----	144	Since the <i>English</i> fought the <i>Dutch</i> at Sea, under the con- duct of his Highness <i>P. Rup.</i>	8
The <i>Royal Exch.</i> first built	117	Last Peace with the <i>Dutch</i> -----	8
A Plague in <i>London</i> whereof died 30598 -----	79	800 Ho ses burnt in <i>Southw.</i>	4
The Gunpowder-treason No- vember 5. -----	77	The Discovery of the Popish Plot -----	4
A Plague in <i>London</i> , whereof died 35418. -----	52	E. <i>Coleman</i> , W. <i>Ireland</i> , J. <i>Green</i> and T. <i>Pickering</i> executed for Treason in the late Plot.	4
A great Plague in <i>Cambridg.</i>	50	Rob. <i>Green</i> , Hen. <i>Berry</i> and L. <i>Hill</i> , executed for mur- thering Sir <i>Edmon. Godfrey</i>	4
Earl of <i>Strafford</i> beheaded, --	41	Since the L. <i>St. Jeff.</i> beheaded --	1
A great Fight at <i>Edg-hill</i> -----	40		A
<i>Brainsford</i> Fight -----	39		
<i>Newbury</i> first Fight <i>Sep.</i> 22.	38		
<i>Newbury</i> second Fight -----	37		
The fatal Battel at <i>Naseby</i> <i>June</i> the 14th -----	37

By this Table and the help of Addition, you may compute the Interest of any Sum whatsoever, from a day to a year, &c. And for the greater exactness, the Penny is divided into a 100 parts, so that 25 parts are a Farthing, &c. This Table is so cald (the Premises being well considered) it needs no Example.

A Table of Terms for the Year 1682.

Quind. Mart. <i>Nov.</i> 25	<i>Nov.</i> 27	<i>Nov.</i> 27	<i>Nov.</i> 28

Note the *Exchequer* opens eight days before any *Term* begins, except *Trinity Term*, before which it openeth only four days.

Also observe, that the first and last days of every *Term*, are the first and last days of *Appearance*.

January hath XXXI Days.

Amount my Muse; let not thy Virgin Flower,
Be trampled down by any Lower Power.
But soar aloft to the Celestial Stars;
And then declare when they do frown Us Wars :
Or smile Us Peace. O Lord assist my Pen ;
Make it a welcome Legate unto Men.

February hath XXVIII Days.

Exalted *Jove's* in *London's* second Sign,
And bold-fac'd *Mars* unto him sends his Trine.
A happy Month, God bless it, quiet Stars,
Inclining Men to Peace more than to Jars;
I wish it may continue; but I fear,
Strange Alterations once within this Year.

March hath XXXI Days.

Here *Mars* from *Aries* doth great *Jove* oppose.
 And *England* now finds out her greatest Foes;
 Where'ere they lurk in Corners, still will she,
 Unmask their Faces, and will certainly,
 Not leave a Stone unturn'd till she has paid,
 Those cunning Foxes, that such Plots had laid.

April hath XXX Days.

*Saturn's in Leo, and bids Rome beware,
A Storm's approaching and 'tis very near.
Let Chronus walk in state, Fore will him find,
To tell his Holiness, he is unkind.*

*VVhat shall I say? strange things I do foresee,
Time will reveal the Truth, so may not we.*

May hath XXXI Days.

Fallhoods and Frauds are rife, they use to be,
 VVhen *Chrohus* squares with nimble *Mercury*.
 Hot-headed *Mavors* leaves the Irish Soil,
 And in the *Twins* he spreads his *Fiery* Tail.
 But gentle *Venus* with her cooling Beams,
 Hath qualified the heat of his Extreame.

July hath XXXI Days.

Five Planets change their Signs, four of them be,
 Bright *Jove*, mad *Mars*, *Venus*, and *Mercury*.
 The Souldier's uneasy, can't well ly;
 The Clergy's not well pleas'd, yet knows not why:
 Nay, brisk young Clerks, yea, and fair Ladies too.
 Must look for Change e'en as your Planets do.

August hath XXXI Days.

Cynthia this Year, will twice *Eclipsed* be,
Th' Earth interposing 'twixt the Sun and the.
Whilst nimble *Hermes* doth with *Titan* run,
To tell at Court what in the Camp is done.
The Month ends well in Amity and Love;
God grant those following no worse may prove.

September hath XXX Days.

September is a Month, where most will find,
The Heavens to low'r, and the Stars notkind.
Then what can Man expect, when Vipers joyn,
Their angry Natures in a Regal Sign?
As Rome's Horoscope, which makes her much fear,
Many Disorders to befall her there.

October hath XXXI Days.

What mean we here! What Congress have I found!
 Whose smart Influence will reach to the ground;
 Of all those Subterranean Acts of late,
 Concealed in darkness, to affront the State;
 But what's the P overb? certainly those shall,
 That make a Pit for others, in it fall.

November hath XXX Days.

Heaven's ditturb'd, which cause disturbed Pates ;
 Confused Councils, more confused States.
Sol from the *Scorpion* squares the bright Star ;
 These are ill Signs when such great ones do jar ;
Chiron squares *Phebus*, which disturbs the Air,
 And unto Potentates bringeth much Fear.

December hath XXXI Days.

Now to conclude, I here will end my Task ;
 And what's amiss, my Readers Pardon ask ;
 For the next Year, I may the same amend,
 VVrite greater things to please my Country-Friend ;
 VVhich is my chief design ; if miss it here,
 I'll try what may be done another Year.

The Kalendar explained

THE Left-hand Page hath seven Columns, the first Column, shews the Days of the Month, the Division on the top of those Columns, contains some *Poetical Observations*; the second, the VWeek-days, the third, the *Festivals* both *fixed* and *moveable*, as also the beginning and ending of the *Terms*; the fourth the Moon's rising and setting, with Latitude in hours and minutes, *viz.* her setting from the Change to the Full, and her rising from the Full to the Change, M. stands for Morning, and A. for Afternoon; the fifth Column the Moon's place in Degrees and minutes in the *Zodiack* every day at Noon, vulgarly called the Sign; the sixth the Planets Mutual Aspects, with what Alterations in the Air may probably happen; the seventh and last the Moon's age.

The Right-hand Page hath eleven Columns, the top Division of this Page shews the Lunations, *viz.* the *new*, *full*, *first*, and *last Quarters* of the Moon: the first Column the days of the week again repeated, the second the week-days of the Forreign Account, the third the Moon's Aspects to *Saturn*, the fourth to *Jupiter*, the fifth to *Mars*, &c. The ninth high VWater at *London-Bridg* in hours and minutes, M. and A. signifies as aforesaid, the tenth Column Astrological Conjectures, the eleventh the Sun's rising and setting, where note as many minutes as the Sun riseth after any hour in the morning, so many minutes he sets before the hour mentioned in this last Column at Night.

Take likewise an Example of the Moon's Aspects, *October* the 5th, I find the Moon (in the third Column of the *dexter* Page) in *Trine* to *Saturn* 17; which tells me that the Moons perfect *Trine* with *Saturn* is not until 5 a Clock the 6th day in the morning, for Astronomers account their days from Noon to Noon; do so in the rest. There are 5 in number of these Aspects, *viz.* ☿, ♀, ☊, ☋, and ♄, whole *Characters* are explained under the Scheam of the World's Revolution. The ☿ of good Planets is good, and evil with evil, ♀'s a good Aspect, the ☊'s a bad Aspect, and produceth Discontent, the ☋'s an Aspect of perfect Love and Amity, the ♄'s worst of all, and brings nothing but Disorder and Confusion to any thing concerned with such a Configuration.

In the Table of *Terms*, read *Trinity Term* begins *June* 16 ends *July* 5.

A Table shewing upon what point of the *Equator* the *Moon* makes a full Sea in any of the undernamed Places, with the Hours and Minutes to be added to her Southing (which is easily found by the following Table) for the true time thereof.

Observations on the Year 1682.

Here followeth the Use of the three last foregoing Pages, whereby it may be made plain to my Country-men, especially to those whose Imployment chiefly depends on the Seas.

Suppose we were to know at what time it would be *High-Water* at *Bristol*, *March* the 5th 1682. (it being already performed on the right-hand page of the *Kalendar* for every day in the Year, at *London*) I turn to the Table of the Moon's Southing, and against the aforefaid day, I find the Moon comes to the South at 5 hours 6 min. in the Afternoon. Then in the first of these three last Tables, I find against *Bristol*, &c. 6 hour. 45 min. which (according as the Title directs) added to 5 hours 6 min. (the Moons southing) makes 11 hours 51 min. so that I conclude it's exactly *High Water* at *Bristol* 51 min. past 11 a clock at night *March* 5. 1682. But if the Sum of the two former Numbers had been above 12 hours, you must then have subducted 12 hours therefrom, and the residue had been the time desired. Again, if the Moon souths in the morning, and you would know the time of the Evening-tyde; or in the Evening, and you would know the time of the Morning-tyde, see how much later the Moon comes to the South the next day, and take its half, which being added to your former time, gives your desire.

But to gain the hour and minute of the Night, observe this order, Repair when the Moon shineth to a Sun-dial, and see how many hours and minutes the shadow wanteth of the line 12, which substract from the Moons southing, the remainder is the hour of the Night; but if the shadow falleth past the twelfth Line, add the hour and minute to the hour and minute of the Moons southing, and the Sum is the true hour and minute of the Night.

Where also note, That the Tyde floweth one point of the Compass more at the Spring-Tydes (which is the New and Full Moons) than at the Neap-Tydes (which are the first and second Quarters); As also land Floods and boisterous Winds may cause some variation; but this is the exactest rule that can be given, in regard the Moons southing is calculated with Latitude.

Observations on the Year 1682.

By Daniel Woodward.

I Shall begin my *Astrological Judgments* with that *punctilio* of time the *Sun* salutes the first scruple of the Equinoctial Sign *Aries*, which according to the *Caroline* Tables is as followeth.

*Creatio Dei narrat Omnipotentiam suam,
Et infinitum amorem Humano Generi.*

Videmus enim effectus multos hic in Terra, quorum causas ignoramus: Beneficio autem vera Astrologia causam suam & originem supra nos in Caelis habere cognoscimus, faith Zanchius, p. 118. De Astro.

I Am now to conjecture of the World's Revolution; and what may be known from thence, is plainly exprest from *Guido Bonatus*, by my loving and most worthy Friend Mr. *Henry Coley* (of whom had I not received his constant kindness, my Labours would have been buried in eternal silence, so that I am joyful of this opportunity to tell the World how much he has been my Friend) in his *Clavis Astrologia Elimata*, pag. 289. viz. 'We know (saith he) by the Revolutionary Figures of the Years of the VWorld, what Accidents will happen each Year, whether Good or Ill, Peace or VVar, Plenty or Scarcity; the condition of Kings, Princes, Nobles, the Religious, and all other sorts and degrees of Men, and quality of Things whatsoever, according to the property of Man therein; of the Dearness and Cheapness of divers Commodities, and what increase may be expected from the Fruits of the Earth, &c.

In the Revolution of this Year, many strange Overtures are expected; for besides the Lunar Aspects, there are seven *Oppositions*, fifteen *Trines*, nineteen *Squares*, twenty one *Sextiles*, and twenty five *Conjunctions*; whereof one of those *Conjunctions* is of most eminent signification to those People, Kingdoms, and Countries where Providence shall dispose of the Effects; which by diligent observation, and long experience, is found to be those especially under the Sign in which the Congress happens. Likewise through the whole *Trigon*, be it *Fiery*, *Airy*, *Earthy*, or *Watery*; but the great *Conjunction* that is celebrated this Year of the two *Superiors*, will be in *Leo*, a sign of the *Fiery Trigon*, which at the time of our Solar Revolution, the twenty second degree thereof, descends the Cusp of the seventh.

Observations on the Year, 1682.

• *Leo* is said to be the *Ascendent* of *Italy*, *Sicily*, *Bohemia*, *Chaldea*, part of *Turkey*, the *Alps*, *Rome*, *Damascus*, *Confluentia*, *Prague*, &c. and the position of the Horoscope of any place on the seventh Angle, naturally denotes Broyls, VVars, and many Contentions; which is the more confirmed by the *Sun* Lord thereof in *Aries*, a fiery Sign, and in *Quartile* to *Jupiter*, and *Conjunction* with *Mars*, a warlike Planet; together with the position of five of the seven Erraticks, in cholerick, fiery, contentious Constellations, which seems indeed to set the whole world in a flame with Heat and Passion; and that the time approaching will as certainly, as God made the glorious Lights of Heaven, raise the Minds and Humours of Men to Controversie and Rebellion, (and those too of the higher sort) more than in many preceding Years: For verily from the Influence of this great *Conjunction*, will succeed strange *Catastrophes*, and unusual Troubles to most Nations of *Europe*.—

The Death of Cattel is hereby signified, excessive Heats, many strange Exhalations, and fiery Meteors in the Air, (perhaps the appearance of another *Comet*) much Thundering, Lightning, and Corruscations, (God preserve us from too too dry a Summer); many Imprisonments, Banishment, or depositing of great Persons; Discords between the People and their Ruler; many bloody VVars, and slaughter of Mankind; Ruins, Thefts; great Famine, by reason of the barrenness of the Earth through excessive Drought.—

It likewise portends change of Governments, Empires, and subversion of Kingdoms.—Many Rents and Schisms in Religion, and more Divisions in the VVays and Opinions of Men, pretending to the Church of Christ, than thousands will believe till it comes, *fiat Dei voluntas*. I only speak this in general terms.

This Judgment is the more aggravated, in regard that these two slow ponderous *superior* Planets, *Saturn* and *Jupiter*, do also meet again, yea, and again, and still in the sign *Leo* (besides the Configurations of other Planets with them) before the Year 1683 is expired, as may be proved by *Calculation*, or by the *Ephemerides* of Mr. *Gadbury*, or *Argol*, which without doubt will be the *Prodromus* of very *prodigious* Effects, and this to happen to those Inhabitants under the Sign *Leo* and its Opposire.

Observations on the Year 1682.

Opposite. Those Places under *Leo* are mentioned already, whereof *Rome* is for one, which bids his Holiness, the Pope, beware.——

Tempus declarabit omnia.

Upon the Cusp of the second ascends *Aries* the *Ascendent* of *England, Denmark, Germany, &c.* which signifies VVealth, Riches, and great Plenty to those Places. *England*, notwithstanding all her Oppositions, is not yet brought to drink the bitter Cup of Poverty.

Taurus, her second Sign, is almost intercepted in the second Angle, and *Venus* Lady thereof Angular, and in her Exaltation too, mightily confirms what is afore spoken, and augments her Substance.

Aries, our English Horoscope, receives little Affliction, and hath *Mars* Lord thereof posited therein pretty potent, Trining *Saturn* Lord of our Tenth in his Detriment, in *Conjunction* with the *Sun*, and applying to the Square of *Jupiter*.

Mercury is also in *Aries* in *trine* to the *Moon*; This denotes our English Nation to be active, and to be imposed upon by none whatsoever.

Mars his square to *Jupiter*, shews who is her Enemy. *Jupiter* is Lord of the ninth from *Aries*, and is the general signifier of the Clergy also. However let them go on and pass the treble *Conjunction* of *Saturn* and *Jupiter*, and then perhaps we shall hear another story.

Of

Observations on the Year 1682.

Of the Eclipses this present Year.

There will be two Eclipses this Year of the *Moon*, which will not be only total, but nearly central too; yet but only one of them will be visible in our Northern Hemisphere.

The first of these Defects will be celebrated *February* the 11th, between ten and eleven of the Clock at Night, in 3 deg. 31 min. 3 seconds of the Coelestial Sign *Virgo*: This Eclipse will be very great (for there will be above 20 Digits eclipsed) and of long continuance, because it happens so near the *Moon's* North Node, or that point of Heaven where the Line of her motion crosseth the North side of the *Ecliptick*. It's true, I begun its Calculation from the *Caroline Tables*, but by reason of my *Quotidian* Practice, and *Avocations*, I could not reach its Period. Those that desire to know what the Portents of this Eclipse may be, I refer them to the perusal of my honoured Friend Mr. *Henry Coley's Nuncius Caelestis*, or at least to his Labours in Mr. *Lilly's Anglicus* for this Year, (as having there more room to breathe in) where they will find plenary satisfaction.

The second will happen the 8th of *August*, in 25 degrees of the sign *Aquarius*, about six of the Clock in the morning, therefore not seen by us; but the Eclipse in its self will be near as great as the former; *Nil nocet Eclipsis illis Regionibus, in quibus non videtur.*

The *Sun* will likewise this Year assume himself twice within the *Ecliptick* Boundaries, viz. on *January* 28. and again on *July* 24. but it is so small (saith Mr. *Gadbury*) that it's not material to be minded. However those that have fit Instruments, and curious withal, may observe them on the said days, viz. the first about 4 hours past noon, the second near 9 hours in the morning.

To

Observations on the Year, 1682.

To conclude, that as I am an *Astrological Professor*, and a *Practitioner* in it's several Parts; so I dare undertake to teach the same to any that desire to understand it, viz.

1. The *Horary* Part, shewing the Method of resolving all manner of Questions belonging to the Body or Estate of Man: As Life, whether long or short, rich or poor? What part of the Life is like to be most Prosperous? What part of the World, City or Country is best to Live in? Whether a Woman be with Child, or ever shall have Children? If one shall fall into the Danger they fear? Servants, if trusty or not? What manner of person one shall Marry? If have the party desired? A Friend, if constant or not? If one may obtain the Office, or place of Preferment desired? If obtain what they desire or hope for? And to be short, all other lawful Demands, whose Solution depends on this Sublime Science.

2. The Part *Genethliacal*, shewing the manner of *Rectifying*, *Directing*, and passing *Judgment* on *Nativities* after the exactest way or Tables yet extant; wherein is made known (or foreseen in a natural way) the most significant and remarkable Accidents that may happen, during the Race of Man's Life, with the time when. And that the *Artist* may be the more accomplished in his Design, likewise shew how to calculate the true Longitude and Latitude of the *Planets*.

3. The *Judgment of the World*, shewing how to calculate and judge of an *Annual Revolution*, frame *Monthly Observations*, the *Calculation of Eclipses*, and to give the Signification of the same, with the portent of *Comets*, or any eminent *Configurations* of the *Caelestial Bodies*, with the Rising, Southings, and Setting of the *Moon*.

And because I shall speak of the Virtues of several Medicaments that I have prepared by me; and especially of my *Cordial Philosophical Pills*, and most pleasant *Drink*, (which are as infallible Medicines as any yet known, as have been prov'd by Experience on Thousands) I thought convenient to give the Symptoms of some Diseases which those famous Medicines have cured,

ured, that my Country-Men may the better understand their
Maladies, for the sake of which, I here first unfold the Signs
of the Scurvy.

1. The SCURVY is now become the most chief and reigning
Disease in this Kingdom; and because it discovers it self so
many ways, a Man had need to have as it were an *Encyclopedie*
of Knowledge to unfold its true Symptoms. This Disease is now
grown so bad as to become scandalous; so that many imagine
it to be a worse Disease; for its chiefest Signs are great Pains in
the Head, Nose, Shoulders, Legs, Bones, with other Pains
all over the Body, Dulness, and Heaviness, with reddish or
blew with Spots and breaking out in the Skin. Weakness in the
Back and Loins, a bad Stomack, and sometimes loss of Appe-
tite, Looseness and Soreness of the Teeth, Throat and Mouth,
a discoloured Skin with Spots, Strains, Pimples, Morphem
and Scurf, and a general Weakness and Faintness all over the
whole Body; insomuch that at last it gets into the Bones, and
infects the very Marrow. In some Persons this terrible Distem-
per causes Megrims, Vertigoes, Lethargies, Frensies, Melan-
choly, Dimness of Sight, &c. In other Persons, Risings, Va-
pours, Cloggings, Stuffings, Gnawings, or illness at Stomach,
with great Sweatings, Spittings, Costiveness, loss of Com-
plexion (as tho it was the Jaundice or Green-Sickness) Short-
ness of Breath, and other ill Habits, caused originally by bad
Diet, ill Air, and living in moist Places, as the Fens and Sea-
Coasts, Heats, Cold, excessive Drinking. In many Persons
it causes a stinking Breath, pains of the Breast and Sides,
rotten Teeth, and Vomiting, which proceed from former Sur-
feits.

2. The Symptoms of the DROPSY, and of this there are se-
veral sorts, but they are all easily known by the abounding of a
watery or windy Humour; swelling sometimes the Hands and
Arms, sometimes the Stomach and Belly, sometimes the Thighs,
Legs and Feet; and sometimes the Body universally, thereby
causing excessive Thirst (as if it were a Flame within) Faint,
Cold Sweats, stoppage of Urine so, as if they had the Stone
or Gravel, and other Obstructions of the Liver, Womb, Reins
and

and Bladder, shortness of Breath, Hoarseness, Wheezing, ill Digestion (the Diseased caring not much to eat) Weakness and Pains of the Kidneys, Pain and Illness of the Stomach, Sides, and Bowels; and some Persons are so desperately swell'd, that they are even ready to burst.

3. The Signs of the *GOUT*; This same is a most horrid Disease, and where it afflicts, it torments with a witness; and is chiefly known by excessive Pains in the *Joints*, as the *Shoulders*, *Elbows*, *Wrists*, *Fingers*, *Thumbs*, *Hips*, *Knees*, *Ankles*, and *Great-Toes*; sometimes it's only fixt, sometimes running from place to place all over the whole Body. In some Persons there's only Pain without swelling, so that nothing can be seen (but in some there's commonly a mixture of the *Scurvy*): In others, there's not only great Pain, but swelling likewise, with a wonderful Weakness and Feebleness: And in some Persons this Disease strikes upwards, causing thereby almost intollerable Pains at *Stomach*, *Sickness at Heart*, *Vomiting*, and other Illness, even as if Death it self would seize them. Some can neither stand nor go; Some not feed themselves, nor use their Hands to any Exercise; and some again are totally lame and enfeebled from Head to Foot.

4. The Signs of the *CONSUMPTION*, It is known by long and violent Distillations of *Rheum* from the *Head* by the *Throat* upon the *Lungs*, *Obstructions* of the principal Organs, (so that Nourishment is hindered from being conveyed to its respective Parts) Paleness of Countenance, much Sweating, sometimes the *Skin* looks *yellowish* like those of the *Faundice*; Some are troubled with *Coughs*, *Colds*, *Hoarseness*, spitting *Blood* or *Matter*, *Ulcers* in the *Lungs*; some spit exceedingly, as if they would spit up their Inwards; some are *Melancholy*, obstructed in the *Spleen*, have *Hectick Fevers*, lingering and wasting away with salt *Rheumes*, shortness of *Breath*, *Chiliness*, *Weakness* of the *Limbs*, dry *Coughs*, faint *Sweats*. Some have running Pains all over the Body, lie Bed-ridden (as if lame, or *Convulsive*) look as if their *Eyes* were sunk, have *Stitches* in their *Sides*, like the *Pleurisy*, crying out of Pain when they fetch their *Breath*; some have inward wastings, as melting of
Fat,

Observations on the Year 1682.

Fat, (seen in Urine) or the *Running* of the Reins. If a Woman, she hath the *Whites*, with other waitings and decays of Nature, causing often times *Barrenness*, Pain and Weakness of the Back; some have great *Fluxes*, as *Loosness*, *Bloody-Flux*, &c. All which several Indications waite the Body, consume the Flesh, and at last (if not timely prevented) bring the Sick to the Grave.

Having declared the Symptoms of these four difficult Diseases, in the next place, follows the Virtues of my prepared Medicines. 1. My *Cordial Pills* and pleasant *Drink*, which cure (besides the Diseases aforementioned) the *Stone or Gravel* in the *Kidneys*, *Stone* in the *Bladder*, *Exulceration* of the *Kidneys*, *Fitts of the Mother*, *Chollick*, *Griping in the Guts*, *Winds*, and *Vapours* from the *Spleen*, *Surfeits*, *Pesilenoe*, *bad Digestions*, *Childrens Distempers*, *Agues*, *Piles*, *Convulsion-Fits*, &c. They also remove *Barrenness*, promote *Conception*, restore *Radical Moisture*, and correct the vitiated Seed of both *Sexes*.

These Medicaments are so truly prepared and so agreeable to Nature, that they perform all their Operations as Nature would have it, as if she had found out Mediums to reduce all her Extrems to an equal Temper, being fitted to all Humours, Sexes and Constitutions, that the least Child may take thereof, sick or well, Summer or Winter. I have inserted nothing, but what my universal *Pill*, and pleasant *Drink* will not fail to cure, as Experience hath found on Thousands of Men, Women, and Children, and doth find true to the End. The Price of each Box of *Pills* is, 2 s. and each Bottle of *Drink*, 2 s. 6 d. 2. My *Balsamick Pills*, that cure inveterate *Head-Aches*, *Melancholy*, *Sleepy-Evil*, *Giddiness*, *Dulness of Hearings*, and helpeth *Pains* in the *Stomach*, *Liver*, *Spleen*, *Gripings* in the *Breast*, *Bowels*, or *Joints*; Price 2 s. the Box. 3. My *Eye-Water*, which cureth all manner of *Eyes*, as *Rheumatick*, *Blood-shot*, or *Sore*; nay, it has restored many to their Sight that have been blind several Years, with *Films*, *Pearls*, &c. by only washing the Eyes therewith for some time. It has likewise a great Power to heal and dry up all manner of *Sores* and *Ulcers* in any part of the Body of *Man* or *Woman*, especially in the *Privities*;

Observations on the Year, 1682.

Privities; Price 1 s. 6 d. the Ounce. 4. My *Unguent*; which is of a most excellent Virtue to open all *Obstructions* of the *Stomach*, causeth a good *Appetite*, and wonderfully kills all manner of *Worms* from Infancy to old Age. In some it dissolveth them so much, that Nature evacuates them like a Jelly; in others it brings them away as it were in Links. Lastly, I also resolve what the *Disease* is, and whether curable or not? Or whether it may end in Life or Death? Therefore let none of what Quality soever be afraid or ashamed to come to me, (whether diseased in Body or Mind) for I am a Person of that Fidelity, not to promise that which I cannot perform.

My Hours (to attend on all Persons that have occasion to speak with me) are from Morning till six in the Afternoon, and none between these Hours shall lose their Labour.
